Date: October 13, 1997.

This directory contains unsupported utilities for doing movie converter
routines and accessing the MDEC.

File:
      mvcnvTar.z

Contents:
      mvcnvTar.z (unsupported for SGI IRIX 5.3)
      Includes the following:
            menc - MDEC encoder for PlayStation
            str - creates streaming data for PlayStation
            unstr - extracts frame data from non-audio str file .
            catstr - concatenates non-audio str files to one non-audio str
            file.
            mixav - interleaves str data with xa audio data.
            readme.txt - English document

Installation:
1. Uncompress mcnvTar.Z
2. tar xf mcnvTar
3. Copy contents of "bin" to some directory (/usr/local/bin for instance).
   Read the "readme.txt" for more details.

Note: Unsupported release for SGI.

File:
      ver11.Z

Contents:
      ver11.z (for SGI IRIX 5.3) - contains a library for accessing the MDEC
      encoding routines. A sample file is included. This will no longer be
      supported in the future.

Installation:
1. Uncompress ver11.Z
2. tar xf ver11
3. 3 directories are created. The contents of the include should be placed in
   your "include" directory (such as /usr/local/include), and the contents of
   the lib directory in your "lib" directory (such as /usr/local/lib).
   Compile and run the sample program in "sample".
