Date: July 1998

The files supplied in \H25DRV are being retained on the CD for backwards
compatibility.

H25.DRV is a driver for use with the DTLH-2500 boards and is designed to be used
with DECICONS, a command line PlayStation communication utility.

Files for flashing the memory of the board for use with H25.DRV can be found in
the following directory:

> \psx\bin\DTLH2500\H25DRV - contains the flash memory program and files for
> running the DTL-H2500 under the H25DRV.EXE
> driver.

> H25drv.exe can be found in the \psx\bin directory.

The files for flashing the board for use with SN products such as WinDebug can
be found in:

> \pssn\bin\DTLH2500\H25BIOS - contains the flash memory program and files
> for running the DTL-H2500 under the SN Systems
> H25BIOS.COM driver.

Instructions on installing the boards have been moved to \psx\bin\DTLH2500, in
the file "install.doc".
